Mountain Weather Forecast

Ground Conditions Supplement

Date: Thursday 17 March 2022. Location: Helvellyn summit at 12:35. Full report: If any of the precipitation over the past 24 hours fell as snow on the higher fells there was no sign of it as no fresh snow has settled. Thus, the vast majority of the Lakeland fells and paths are now free from snow up to, and including, summit level. The only old snow remaining lies above 850m in sheltered spots and hollows and on steep north and east facing slopes. Owing to a sharp overnight frost at altitude the snowpack was firm to icy; as such, despite a summit temperature around midday of plus 2 degrees and persistent rain, there was only a marginal thaw. However, any snow patches lying on paths are avoidable; with careful route choice there are now even snow free exits to both Striding and Swirral edges. Following the overnight frost at altitude, above 850m there were isolated patches of ice on rocks and in puddles. Following today's rain the ground is saturated and an overnight frost almost to valley level is forecast, so walkers out on Friday, especially in the morning and ascending the higher fells, should expect to encounter more ice on paths and rocks. Despite the daffodil filled valleys, the summit windchill (what the temperature feels like) was minus 6 degrees around midday, so full winter clothing (waterproofs, extra warm layers, hat and gloves), mountain boots and equipment - including torch, map and compass and the ability to use them - are all essential for those going onto the fells. This is not just for safety but also for enjoyment as Friday's forecast currently looks like it should be a day to reach the summit, don extra layers and linger to enjoy magnificent panoramas! Yes, hopefully sunglasses will also be essential equipment! Come properly equipped and enjoy! Temperature: plus 2.0 C, Maximum wind speed 29.8 mph, Wind chill: minus 6.2 C, Average wind speed: 23.1 mph
